

# How to fly worldwide

Firstly please ensure that the Aerofly FS 2 is up to date. In the current version there are two ways to fly around the world:

1. Go to the main menu and open the map by clicking on "location". The map can be moved and zoomed worldwide. In aerofly FS 2 the Earth is an ellipsoid. Under navigation you can select airports and nav aids worldwide. In the "Location" menu the orientation is purely geographical.
2. Go to the main menu and open "navigation". The map can be moved and zoomed in or out worldwide. Under navigation you can select airports and nav aids worldwide. You can add any waypoint worldwide.
