

What is the tm.log file and where can I find this

Also see the main article about the [tm.log](#)

The text file tm.log is very important to the Aerofly support team and for troubleshooting. You can find the tm.log file in the user directory under:

C:\Users\...\MyDocuments\Aerofly FS 2

You can open this file with a text editor or you can send the tm.log file as an attachment to the support team.
