

# Conditions

Setting up flight conditions in Aerofly FS 2 is easy with the intuitive interface. Setting up time of day, cloud coverage, wind, and thermal conditions can be quickly achieved with a couple of clicks.

## Time

To set your time of day simply slide the bar to the desired time that you wish to fly. **Note** UTC time is used based on the region that you are flying in. UTC is the standard time used in Aviation.

## Wind

### Strength

This slider adjusts the strength of the wind. You can choose anywhere from calm to strong. Can you handle landing in strong wind?

### Direction

The direction slider allows you to adjust the direction that the wing blows in degrees.

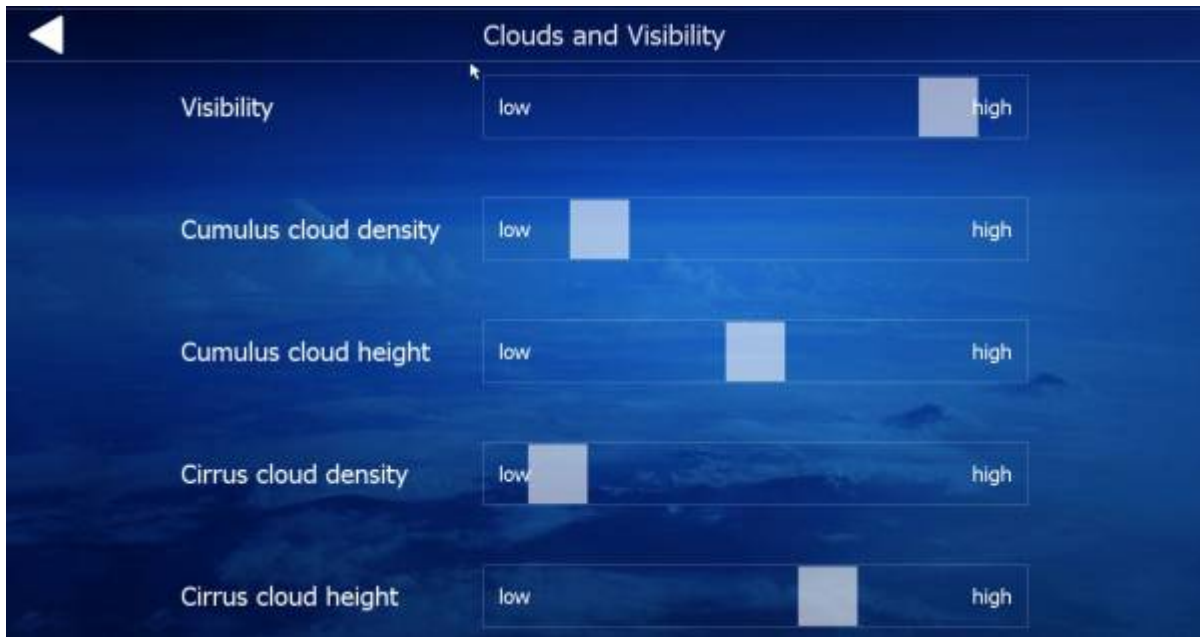

### Turbulence

This setting sets the amount of aircraft turbulence that you experience. This can be set from low to high.

### Thermal Activity

This setting adjusts the amount of thermal effects that you will experience in Aerofly FS 2. This can be set from low to high.

## Clouds and Visibility

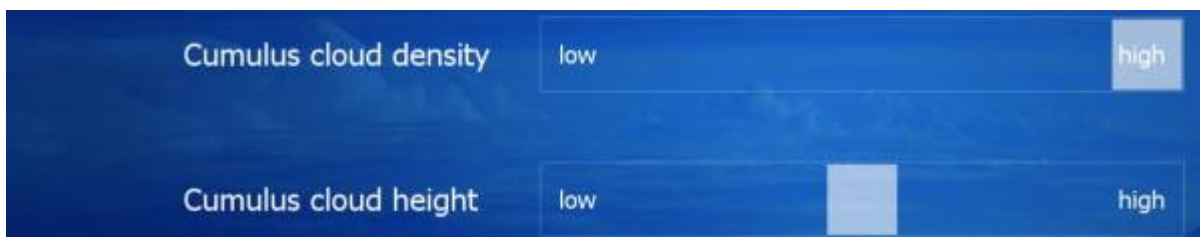

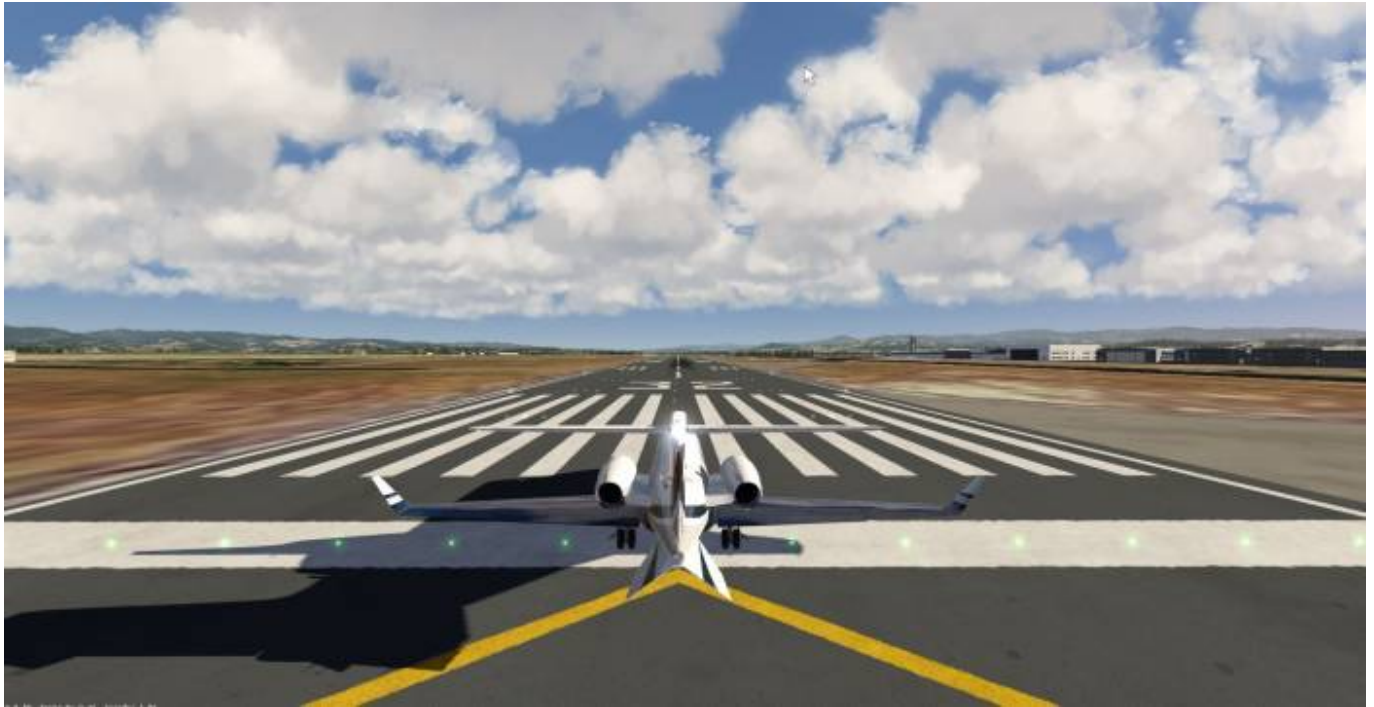

## Visibility

Setting visibility creates a haze and fog effect. Settings can be from low to high. The higher the setting, the less that your visibility will be impacted.

## Cumulus Cloud Density - Cumulus Cloud Height

You can change the amount of Cumulus clouds and elevation of the clouds by moving the sliders to the desired settings that you want.

### Cirrus Cloud Density - Cirrus Cloud Height

You can change the amount of Cumulus clouds and elevation of the clouds by moving the sliders to the desired settings that you want.
